

# Augsnes kartes sastādīšana izmantojot ĢIS

# Kas ir ĢIS?

**Ģeogrāfiskās Informācijas Sistēmas (ĢIS)** ir tehnoloģiju kopums, kas izveidots ģeogrāfisku datu uzglabāšanai, atjaunošanai, analīzei un attēlošanai.

# GIS pielietojums

- Kartēšana/ vizualizācija (*mapping*)
- Ģeogrāfisko datu apstrāde (*geoprocessing*)
- Telpiskā statistika (*geostatistics*)
- Telpiskā analīze (*spatial analysis*)
- Tālizpētes datu apstrāde (*remote sensing*)
- Simulācijas (*simulations*)
- Modelēšana (*modelling*)
- Datu servisi tīklos

# GIS sastāv no:

# Datortehnika

- Dators
- Printeris
- Skeneris
- GPS

# Programmatūra

- **Desktop GIS** (QGIS, SAGA GIS, GRASS GIS, ILWIS, IDRISI, Esri products: ArcGIS, ArcMap, ArcGlobe, GeoMedia, MapInfo, Bentley Systems: MicroStation, ENVI, ERDAS IMAGINE)
- **GIS as a service** (ArcGIS Online, Mapbox, OpenStreetMap, Google Maps, Apple Maps, Here Maps, Bing Maps)
- **Spatial database management systems** (MySQL, Oracle Spatial, Microsoft SQL Server, PostgreSQL)
- **Map servers** (Geoserver, MapServer, Mapnik)

**ArcGIS**

Google Maps

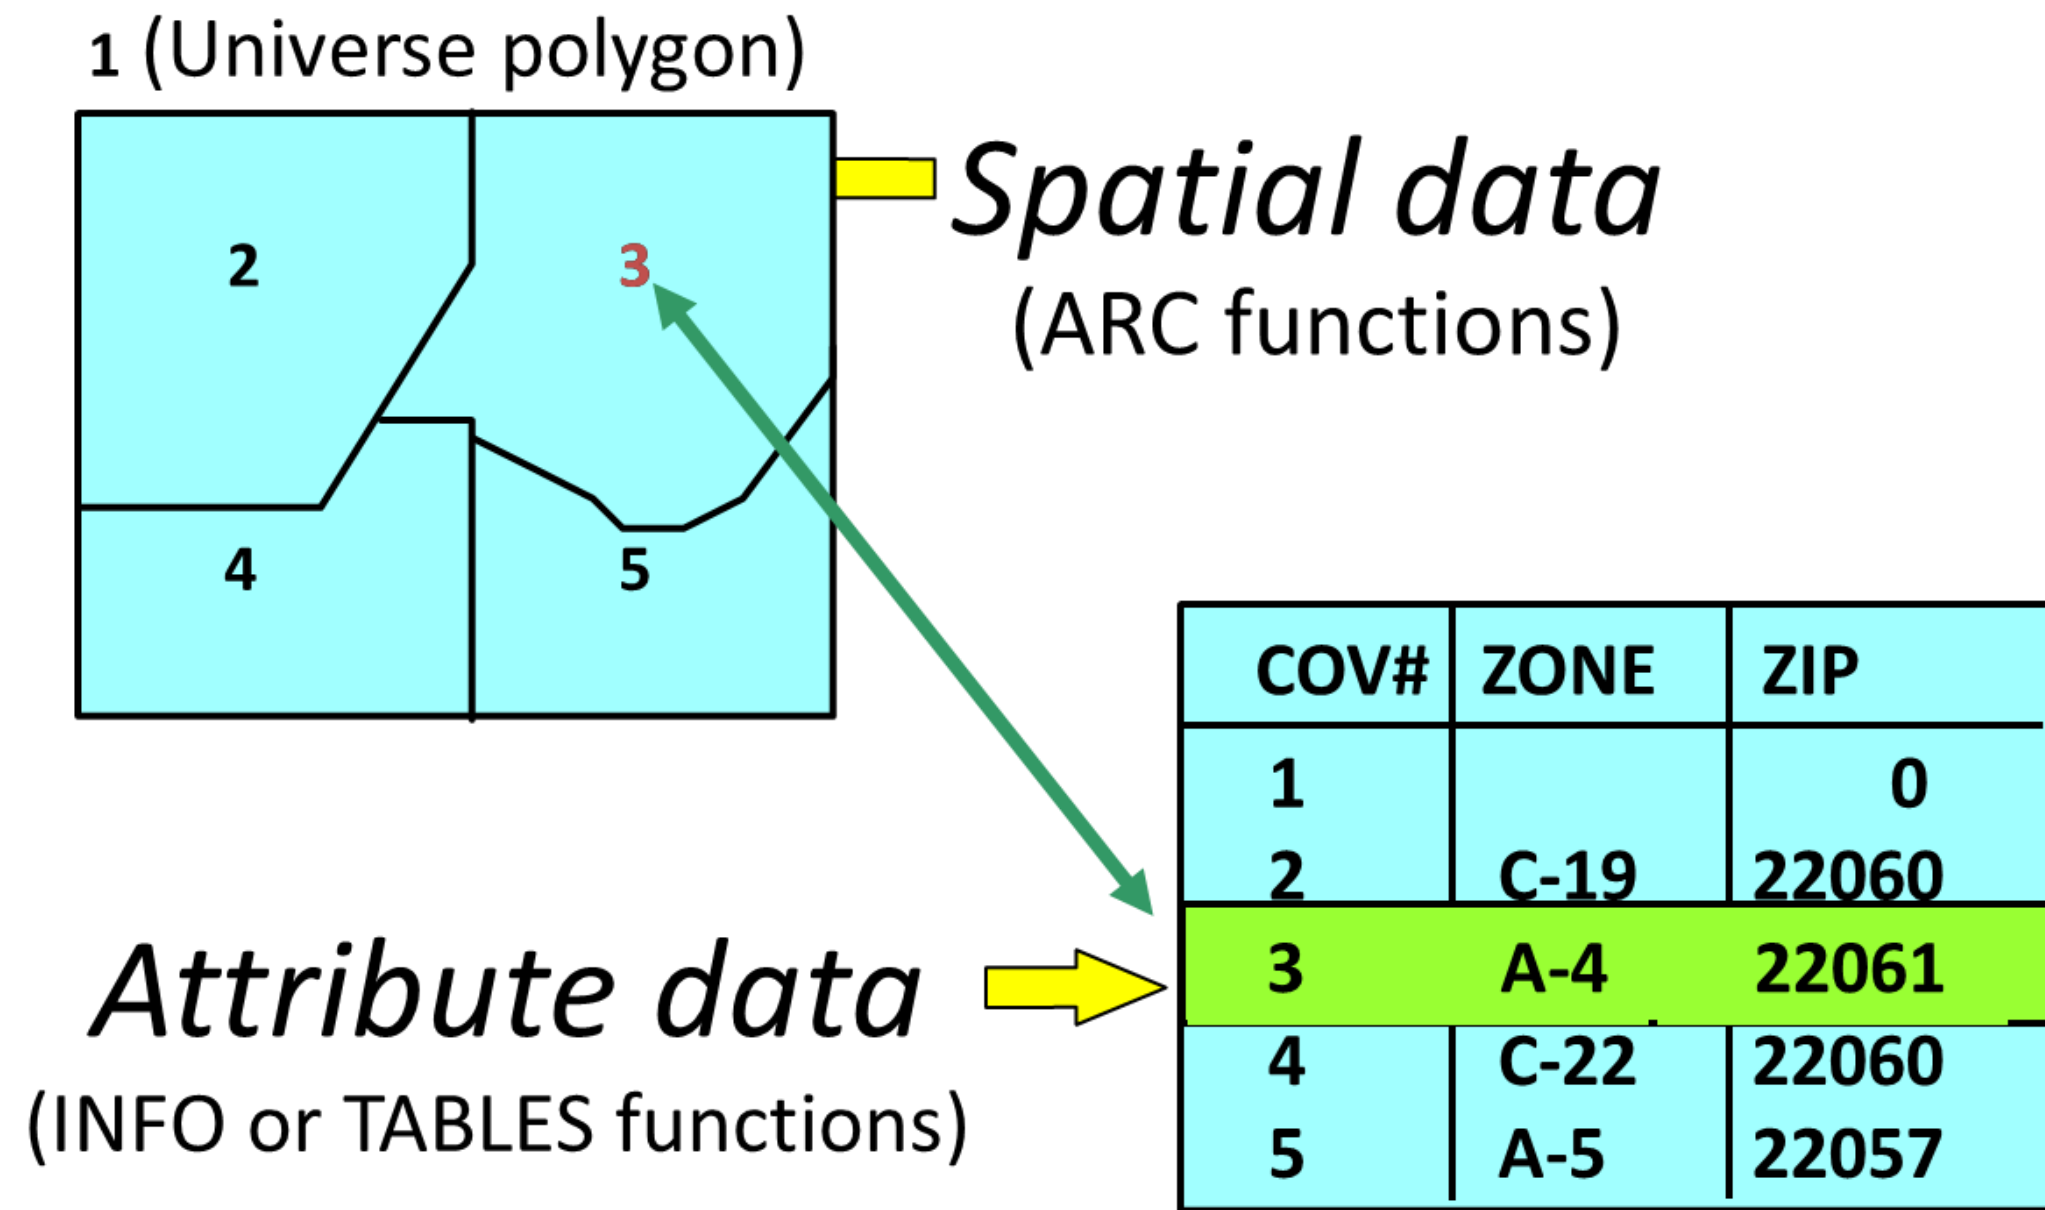

**OpenStreetMap**

## Information

### Data

- 100

### Information

- 100 miles

### Knowledge

- 100 miles is quite a far distance.

### Wisdom

- It is very difficult to walk 100 miles by any person, but vehicle transport is okay

# Cilvēki

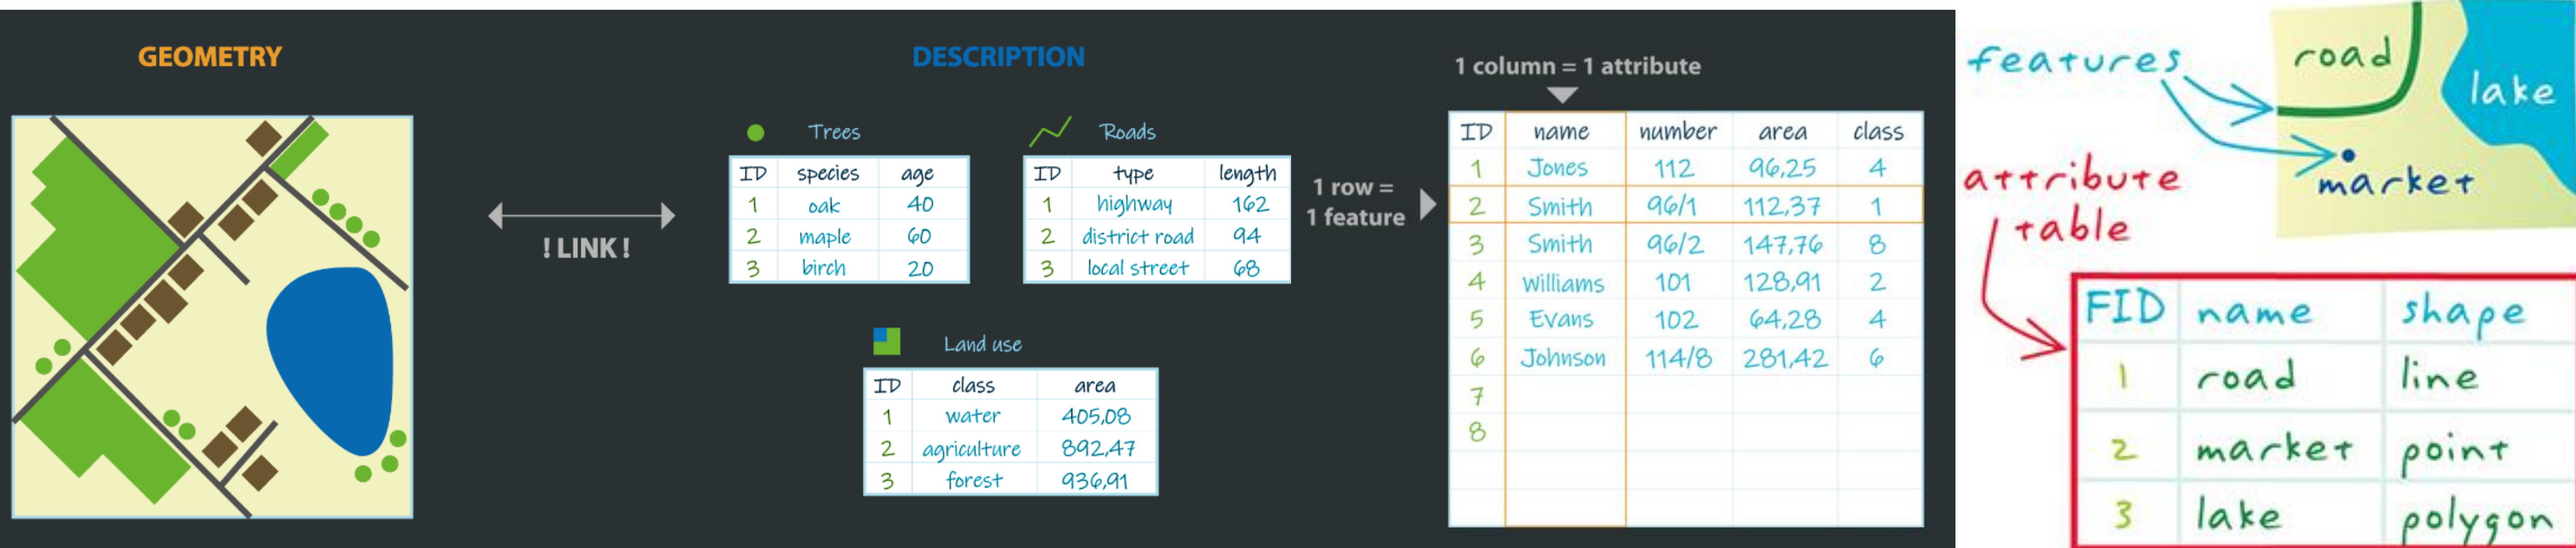

# Telpiskie dati un atribūtu dati

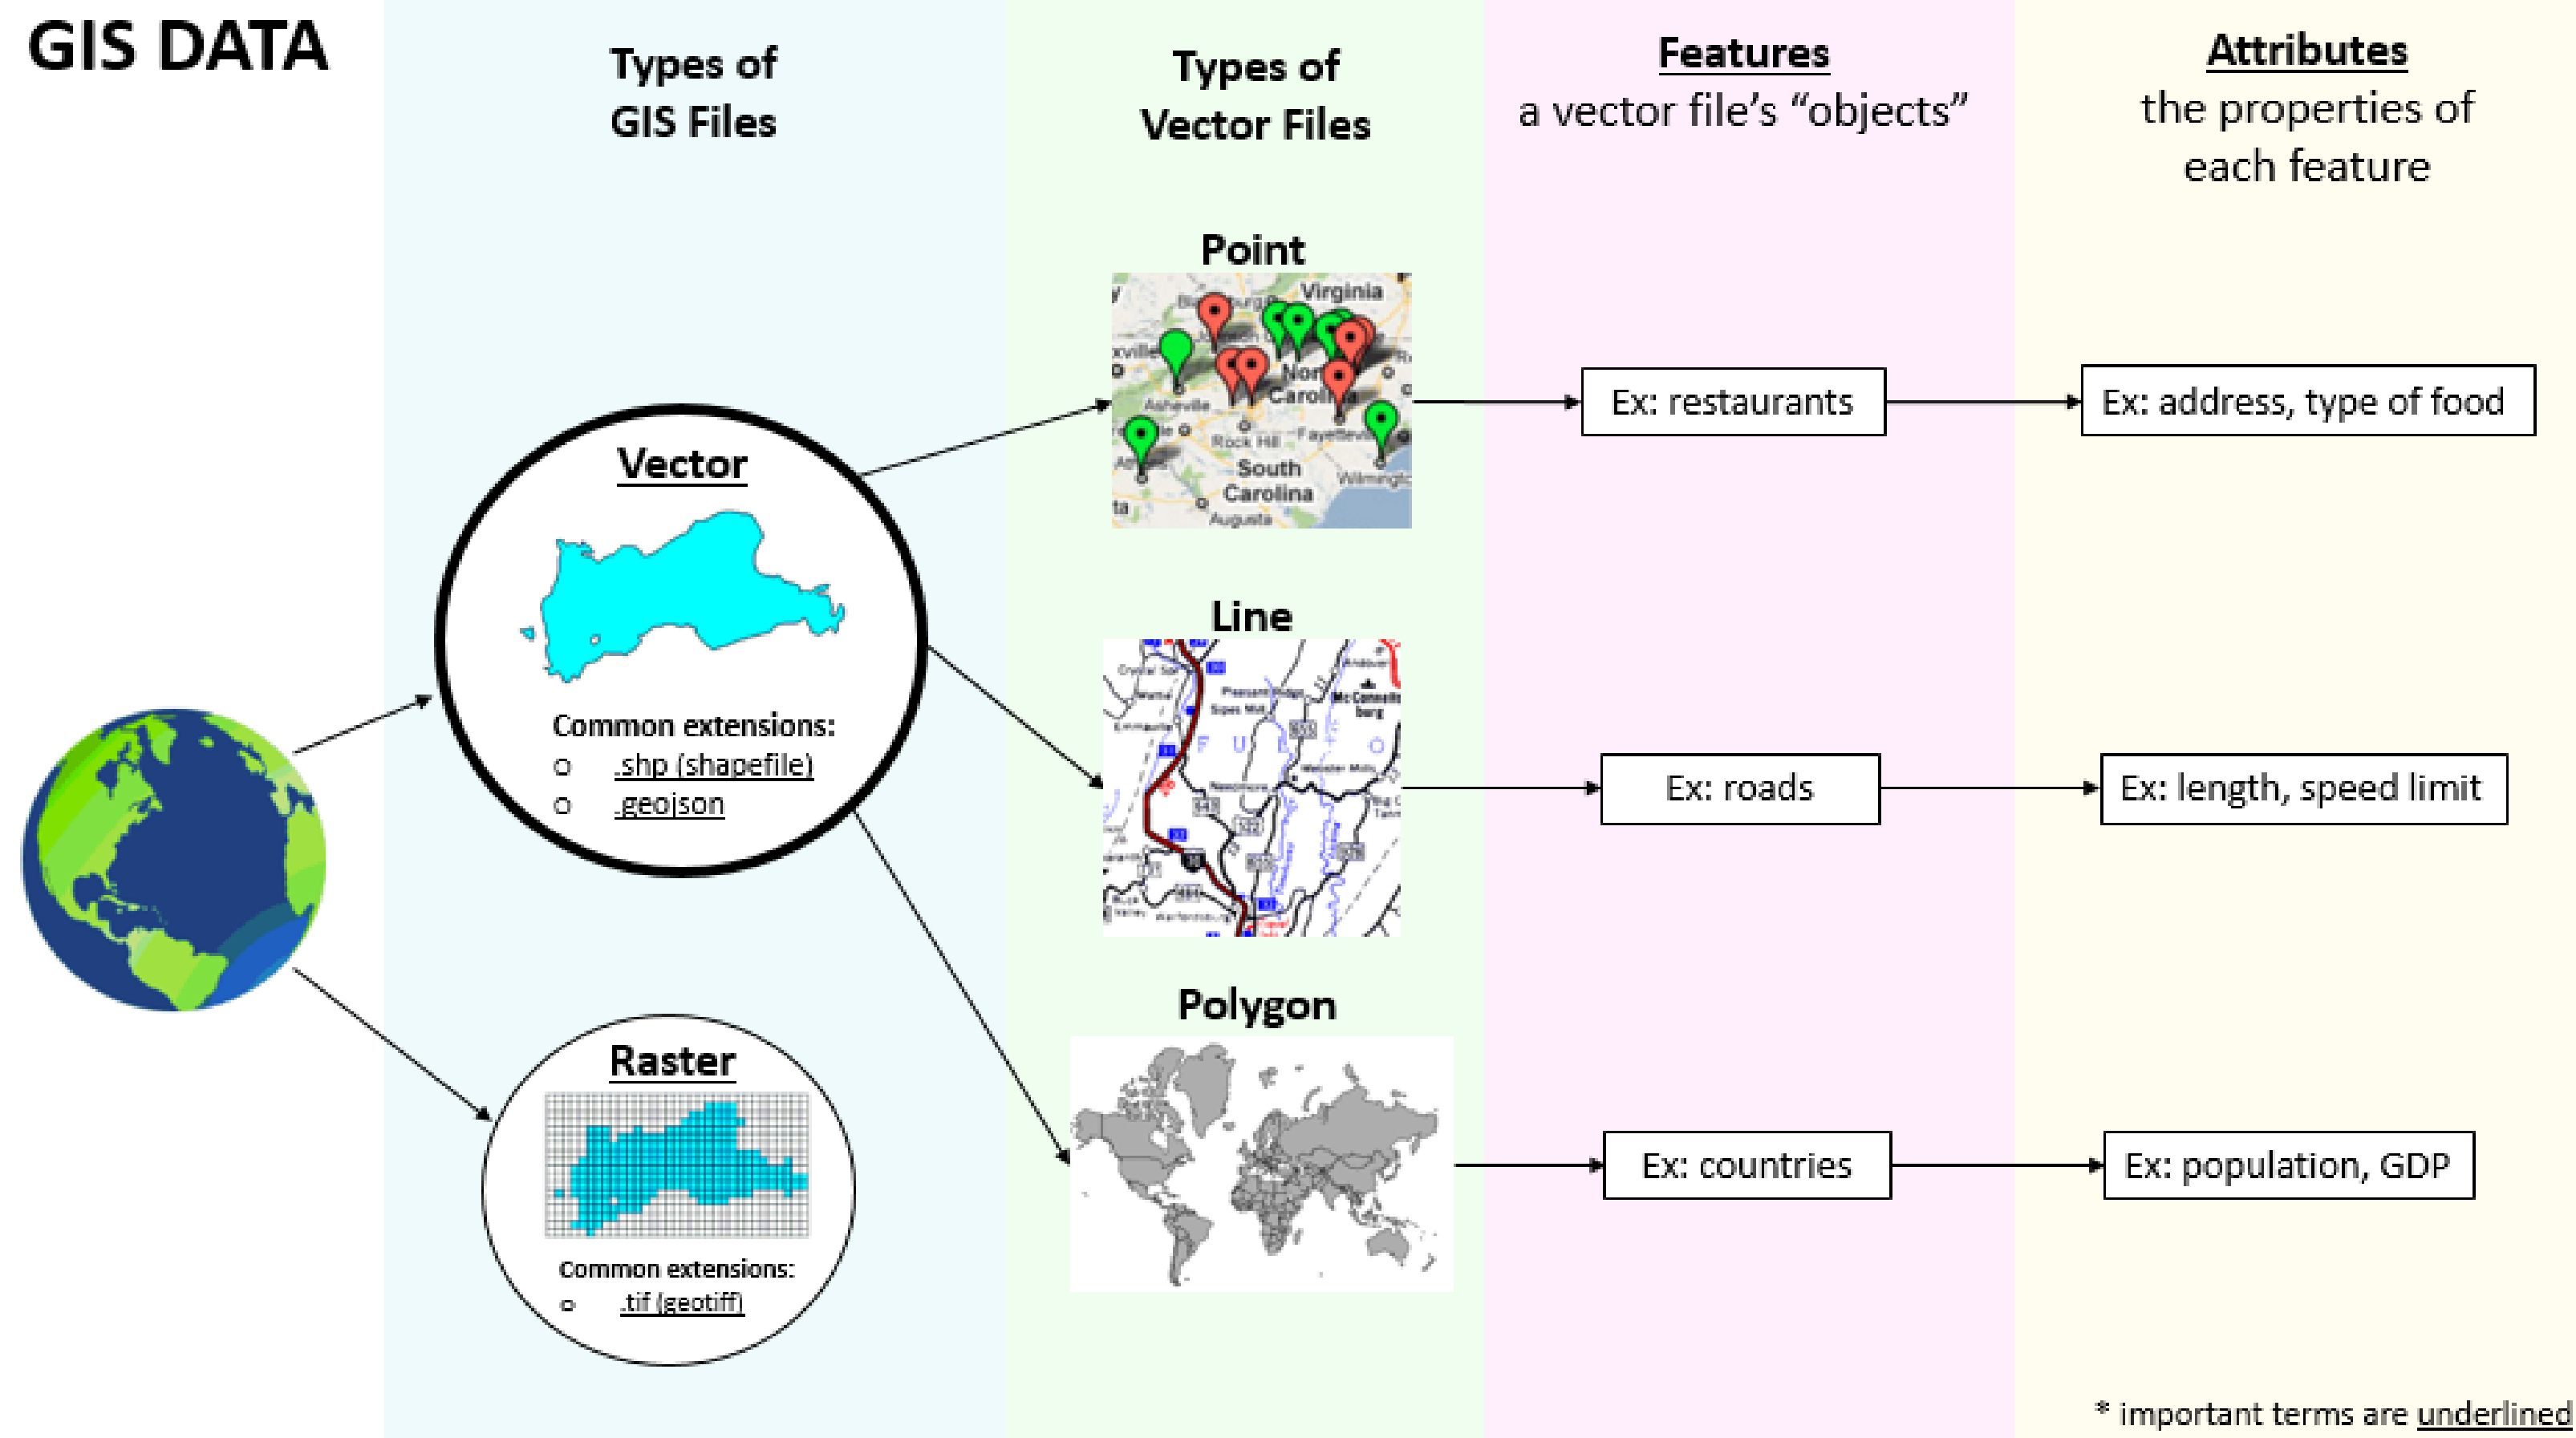

**Telpiskie dati** ir visi dati, kas tieši vai netieši attiecas uz konkrētu atrašanās vietu vai ģeogrāfisko apgabalu. Telpiskie dati apraksta formu, atrašanās vietu, telpiskās attiecības un ar Zemes virsmu saistīto pazīmju atribūtus.

**Atribūts** ir informācija par objektu, kas parasti tiek glabāta tabulā un saistīta ar objektu ar unikālu identifikatoru (ID), nav telpiska.

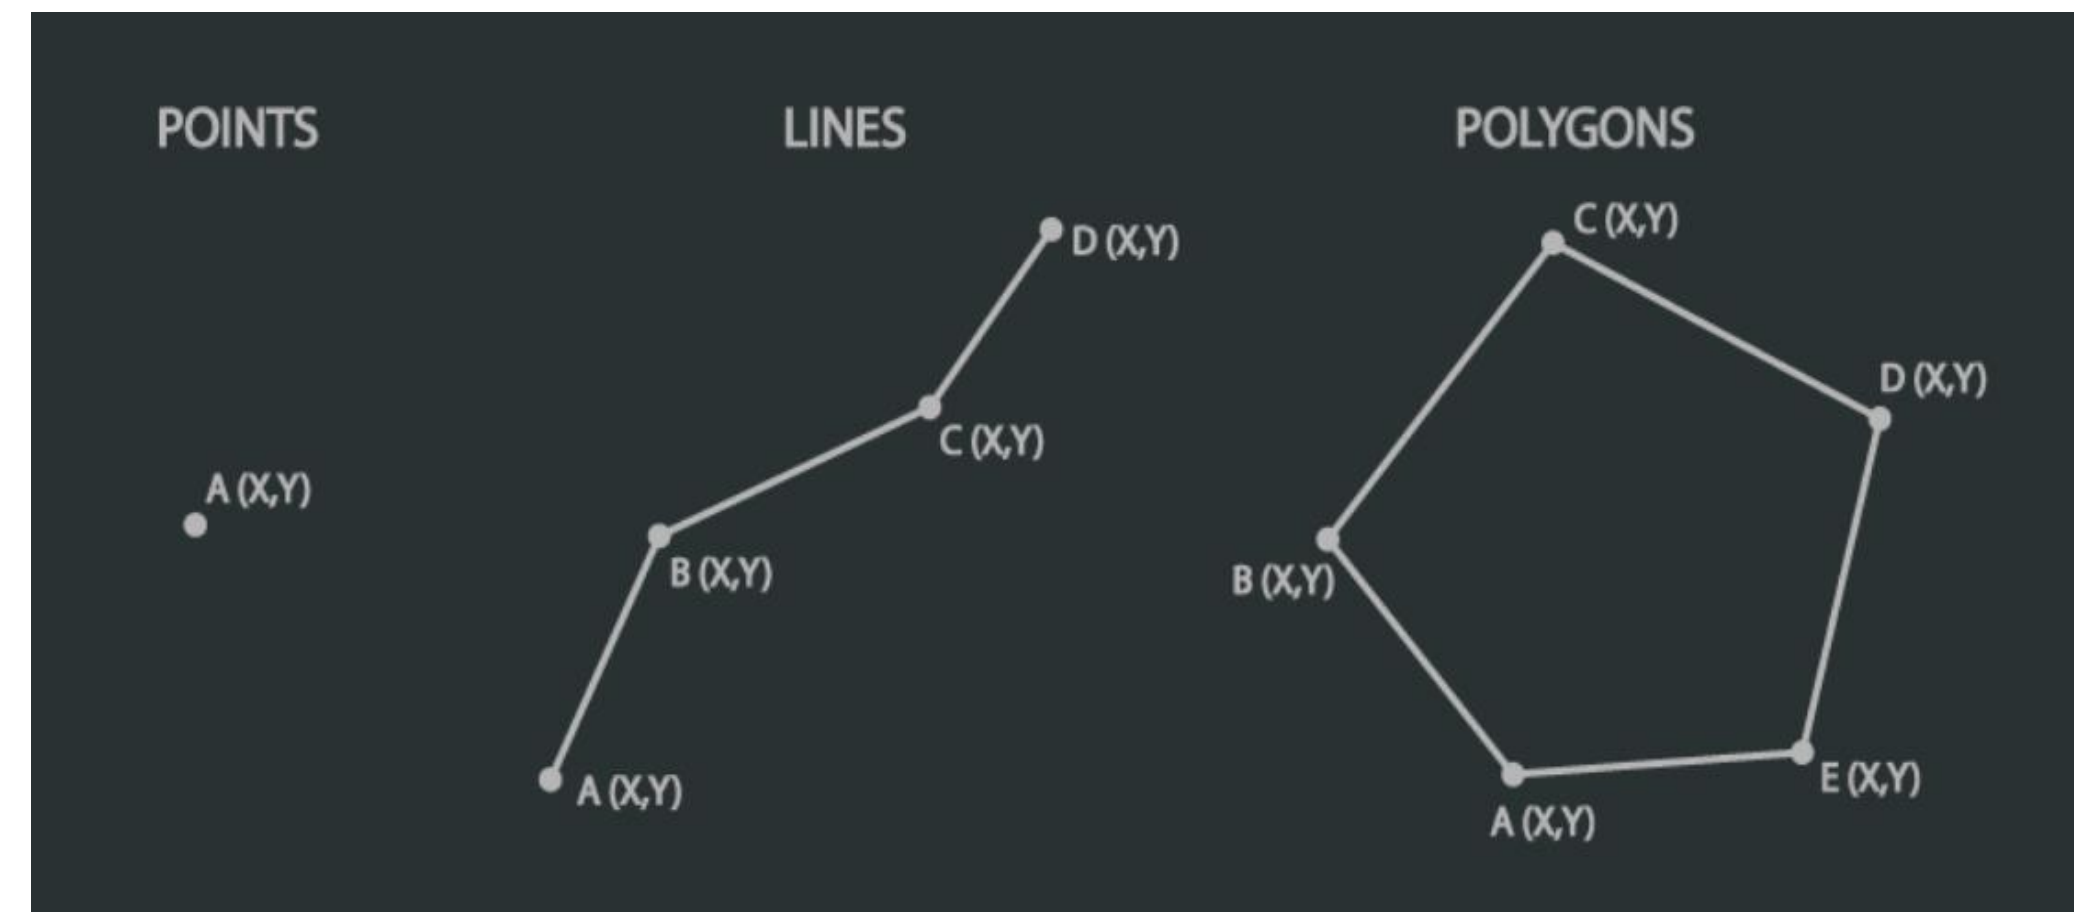

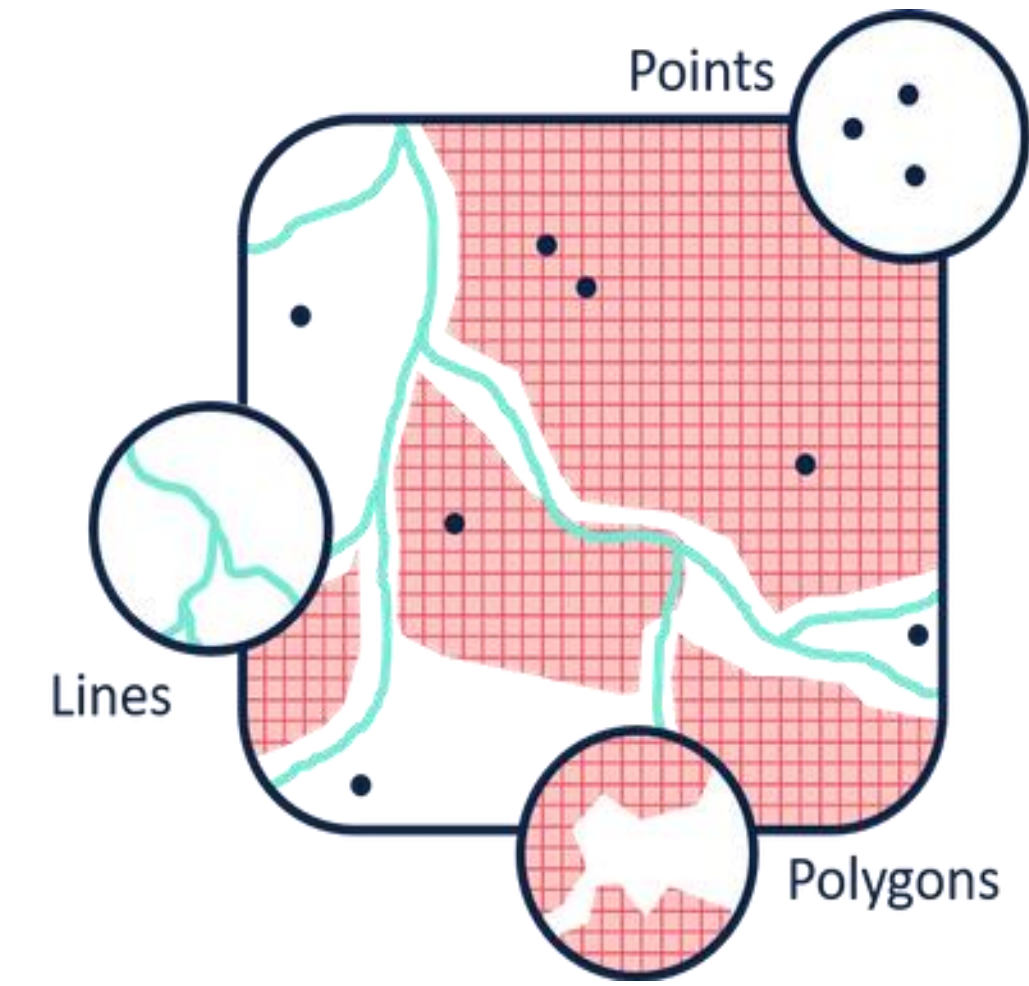

# GIS data tipi

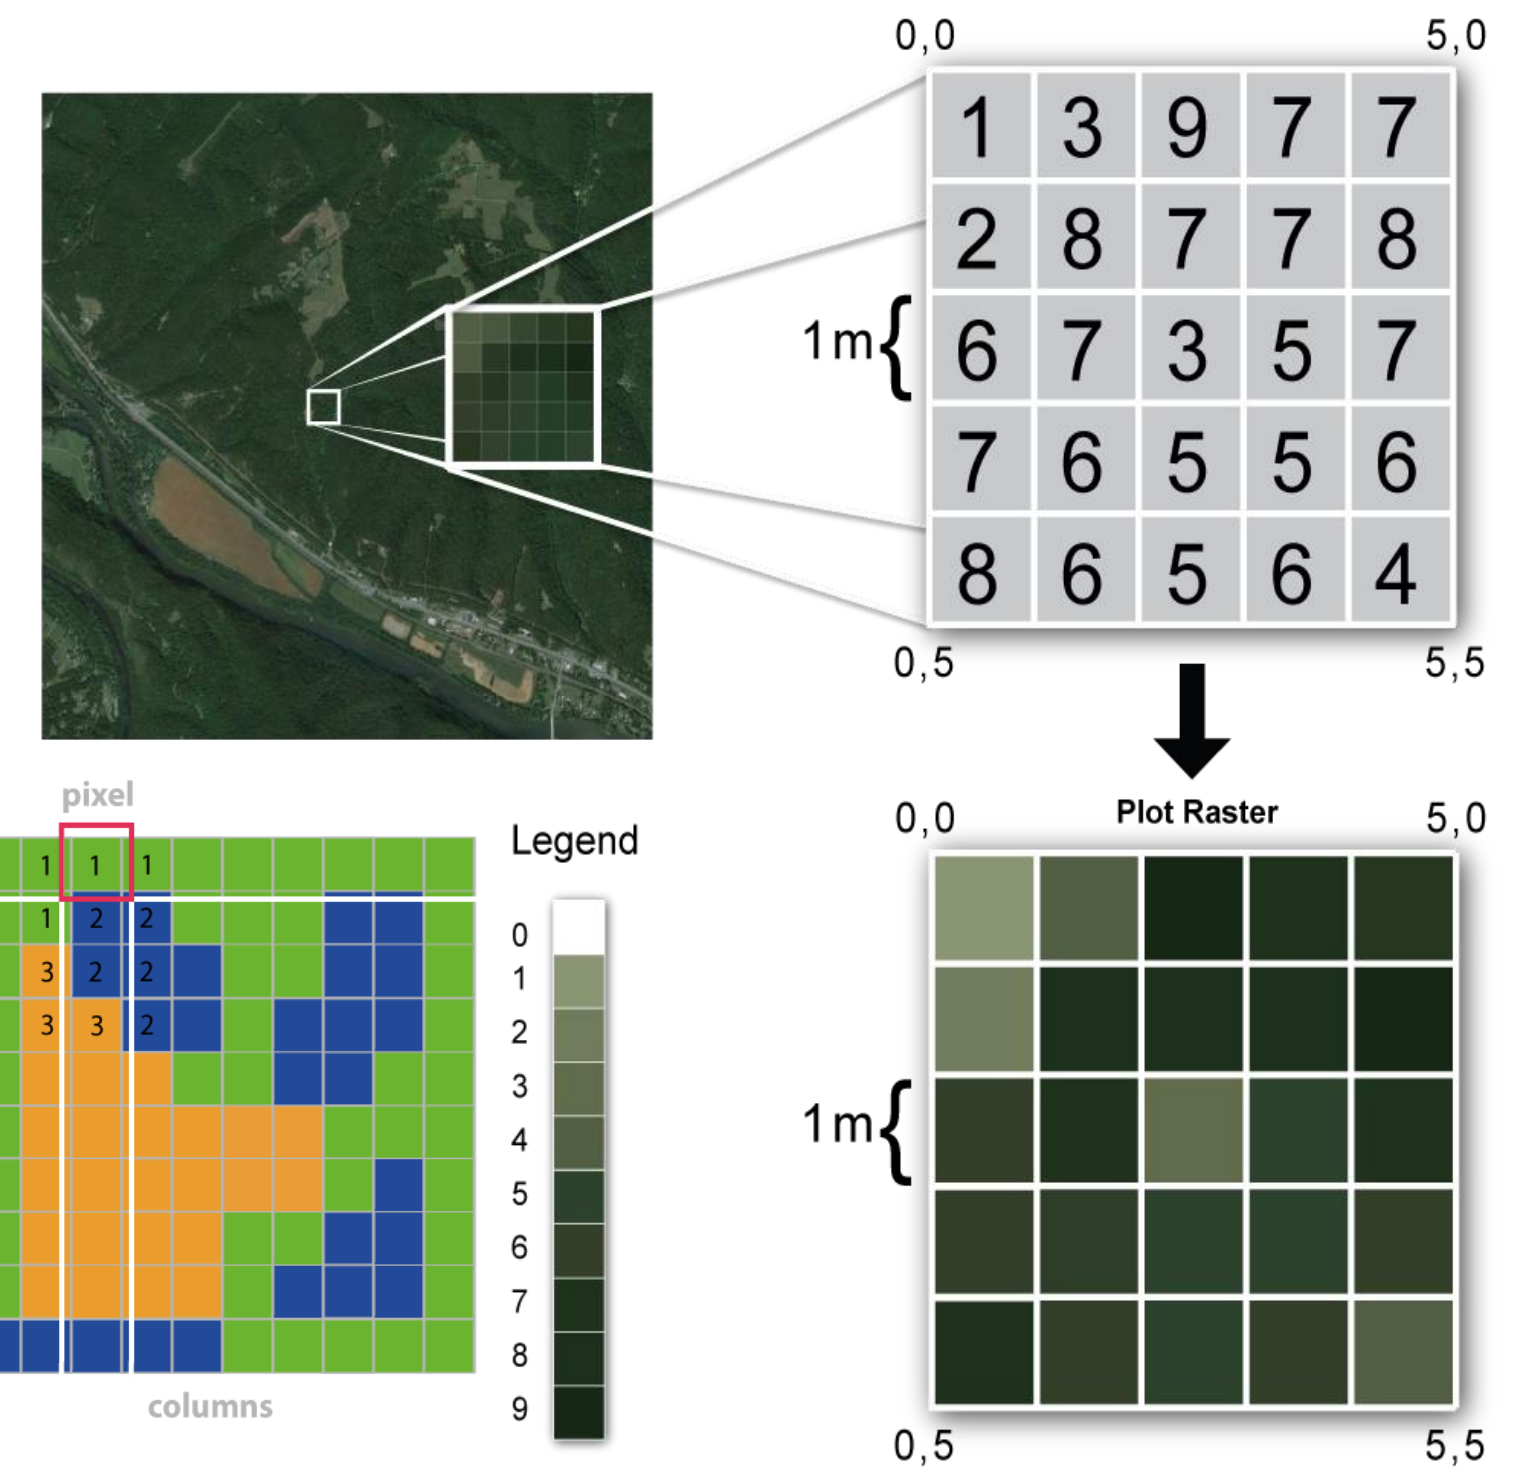

# Vektora dati

# Rastra dati

Raster over the same extent, at 4 different resolutions

# Vektora datu avoti

A - GPS measurements

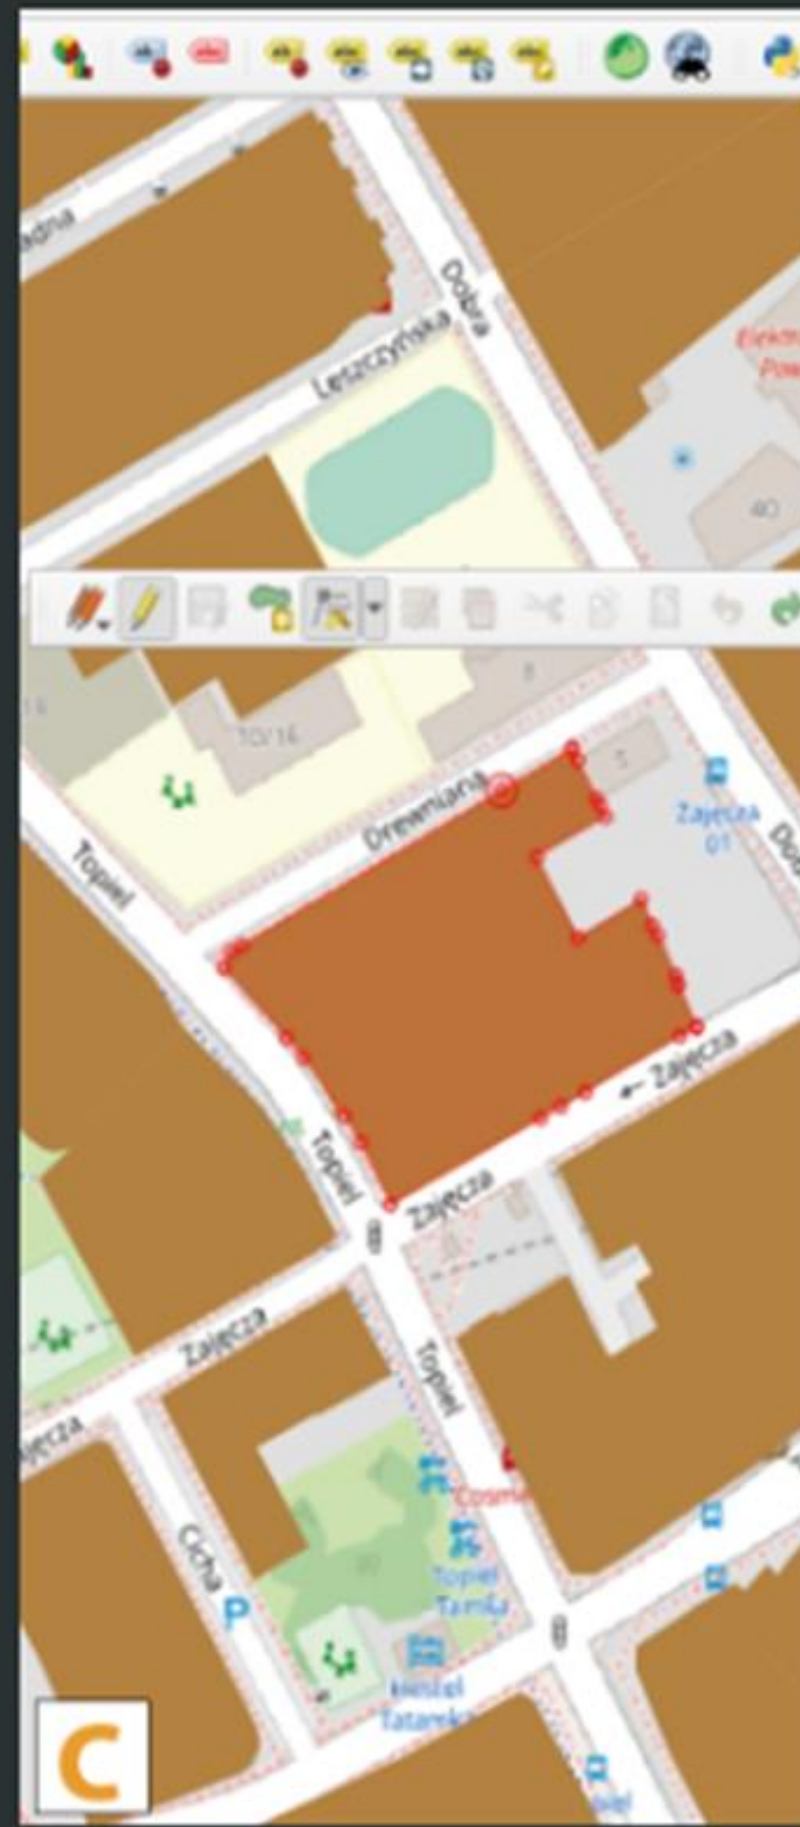

B - list of coordinates

C - digitizing and conversion tools e.g. *raster to vector*

D, E - existing databases

# Rastra datu avoti

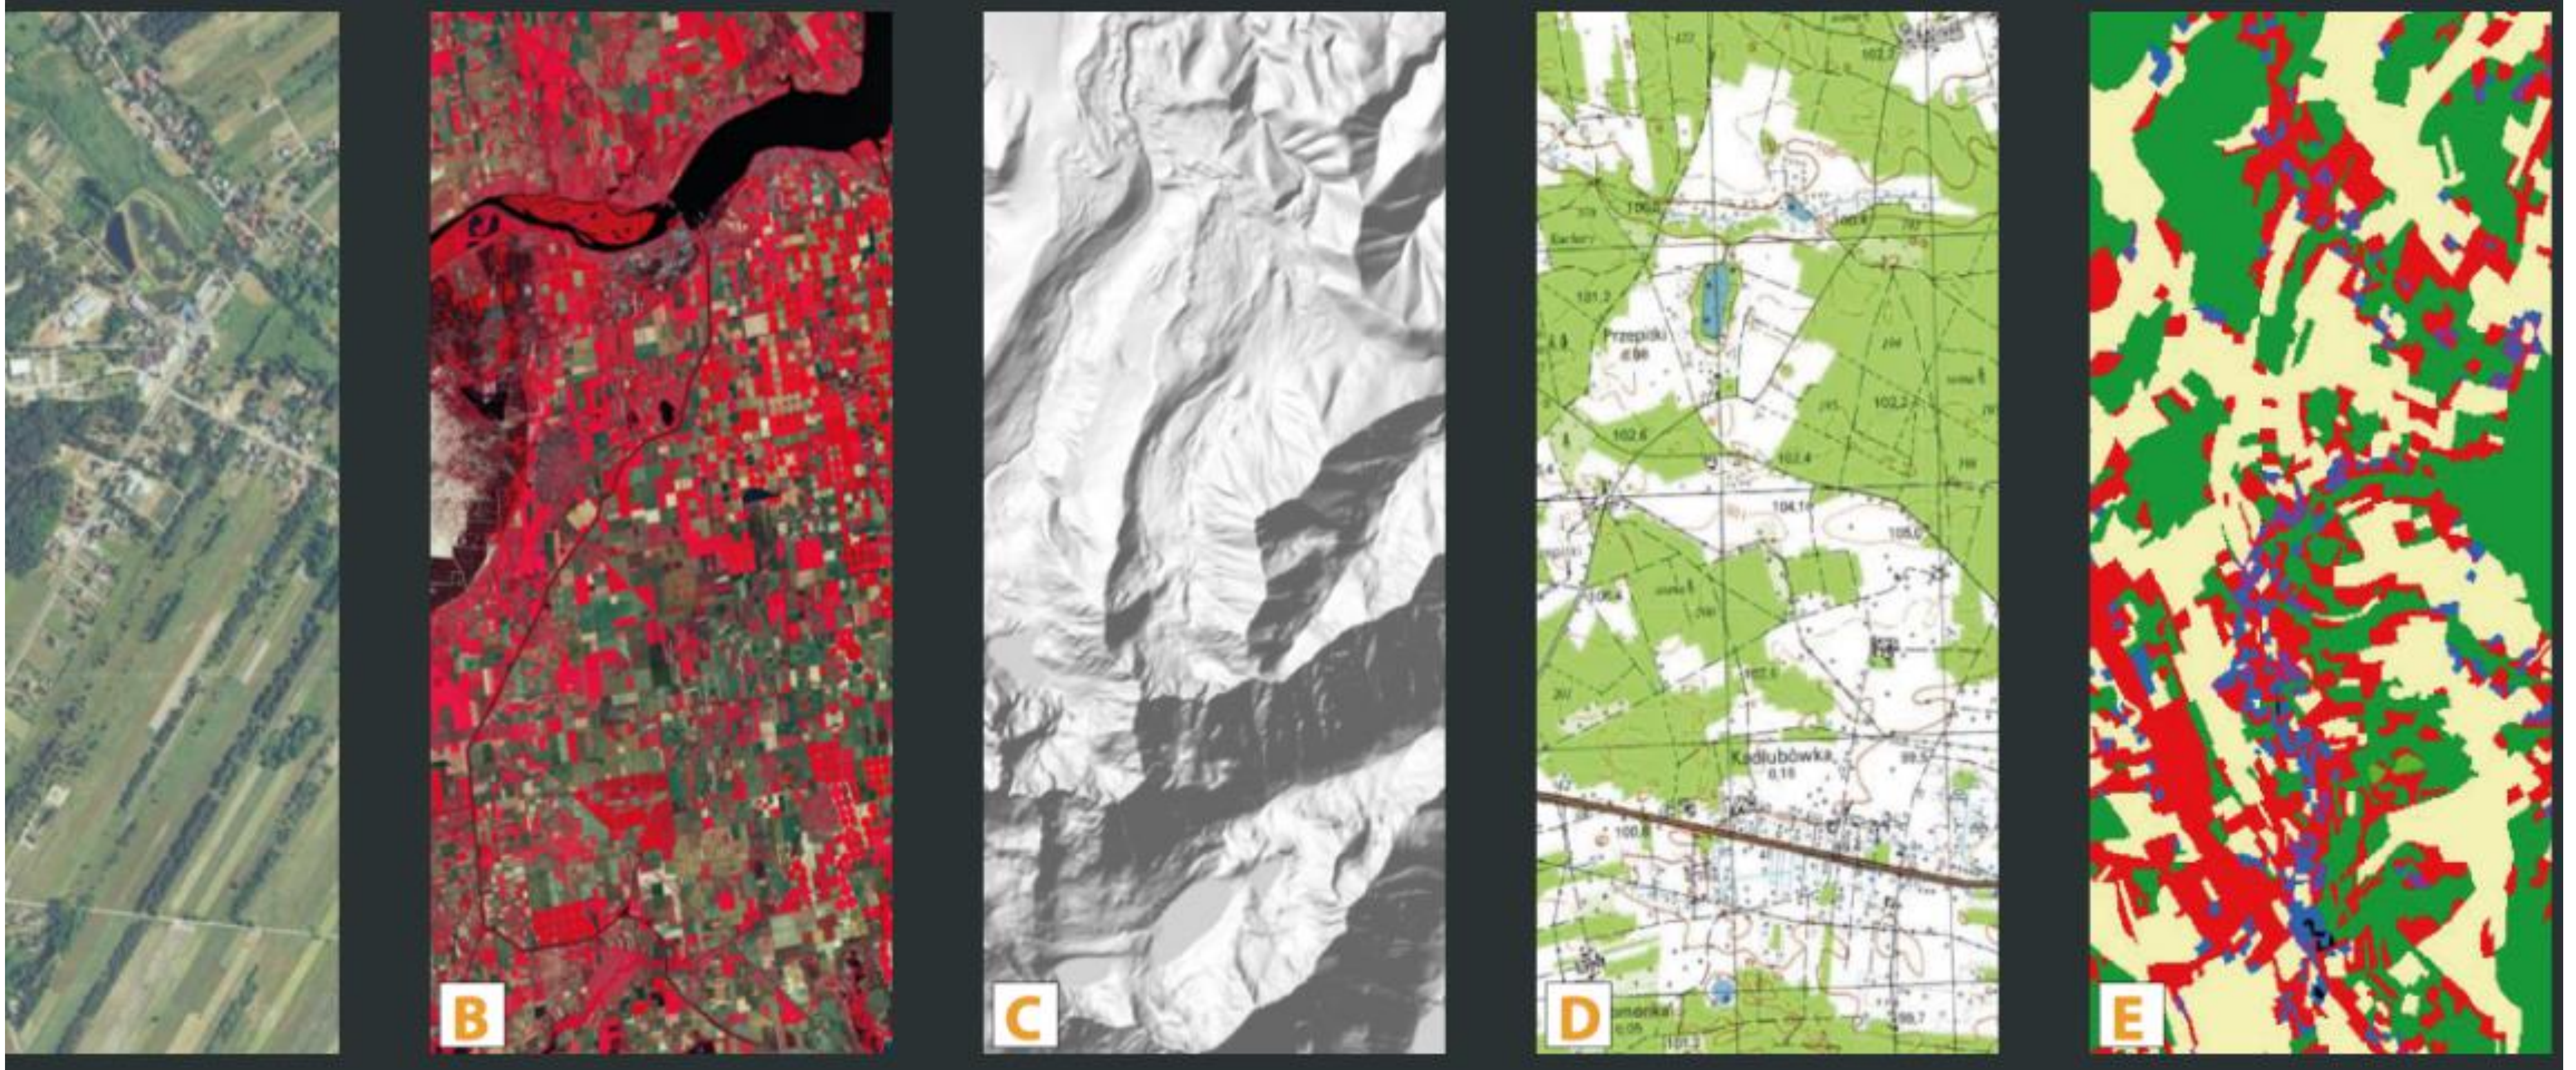

A - orthophoto

B - satellite imagery

C - DEM

D - scanned maps and plans

E - conversion and analysis tools *e.g. vector to raster, interpolation*

# Dati par augsnēm

# Vektora un rastra failu formāti

**ESRI Shapefile** - the most common geospatial file type developed by ESRI, consists of:

- shp (feature geometry)
- shx (shape index position)
- dbf (attribute data)
- prj (projection system metadata)
- xml (associated metadata)

**GML** (Geography Markup Language) - XML based open standard for GIS data exchange

**KML/KMZ** (Google Keyhole Markup Language) - XML based open standard for GIS data exchange

**GPX** (GPS eXchange Format) - GPS data file

**GeoJSON** (Geographic JavaScript Object Notation) - a lightweight format based on JSON, used by many open source GIS packages

**GeoTIFF** - TIFF variant enriched with GIS relevant metadata, may be accompanied by other files:

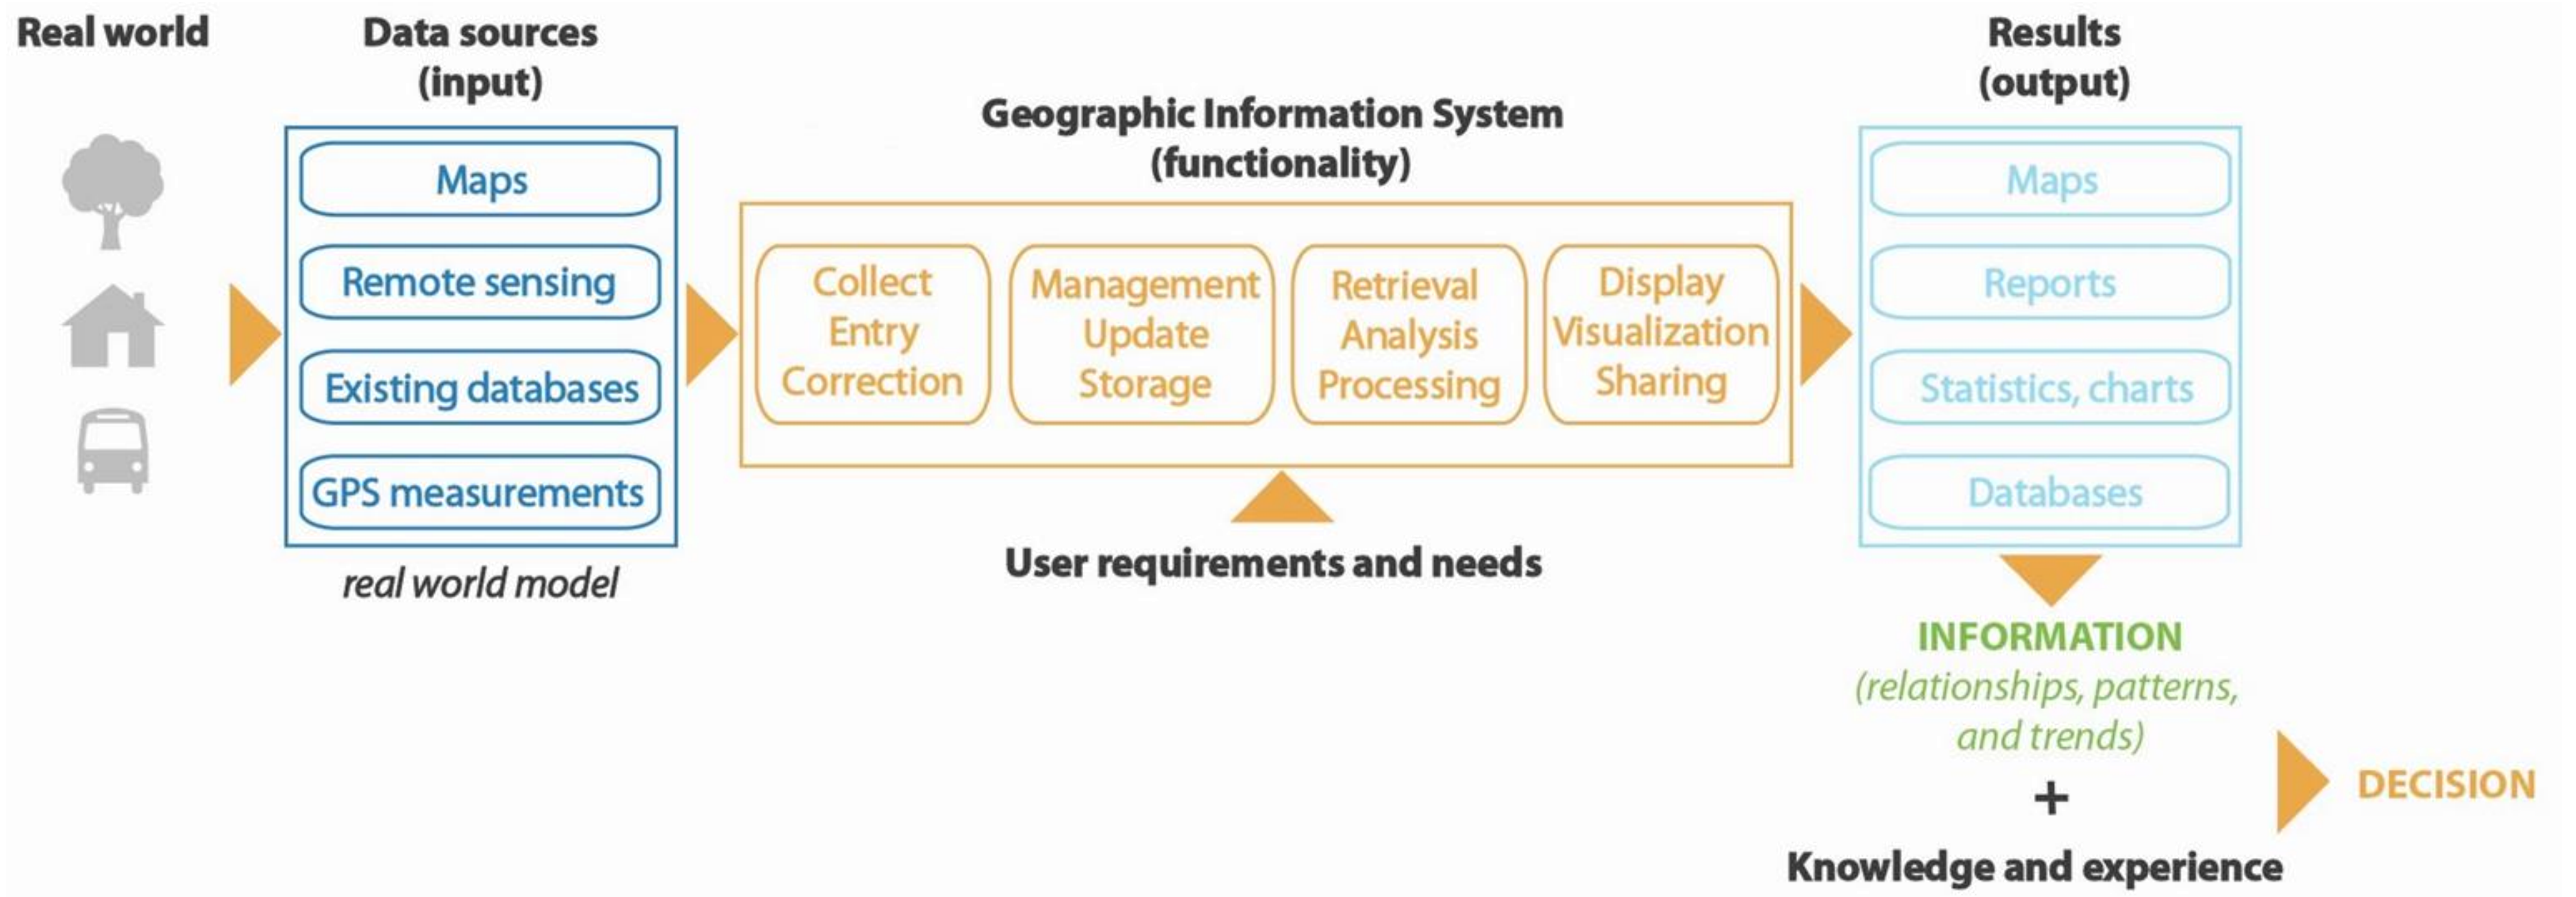

- tfw (raster geolocation)
- xml (metadata)
- aux (projections and other information)
- ovr (pyramid files improves performance for raster display)

**IMG** - ERDAS IMAGINE image file format

**ESRI Grid** - format developed by Esri, which has two varieties: binary or ASCII

# No kartēšanas līdz kartei

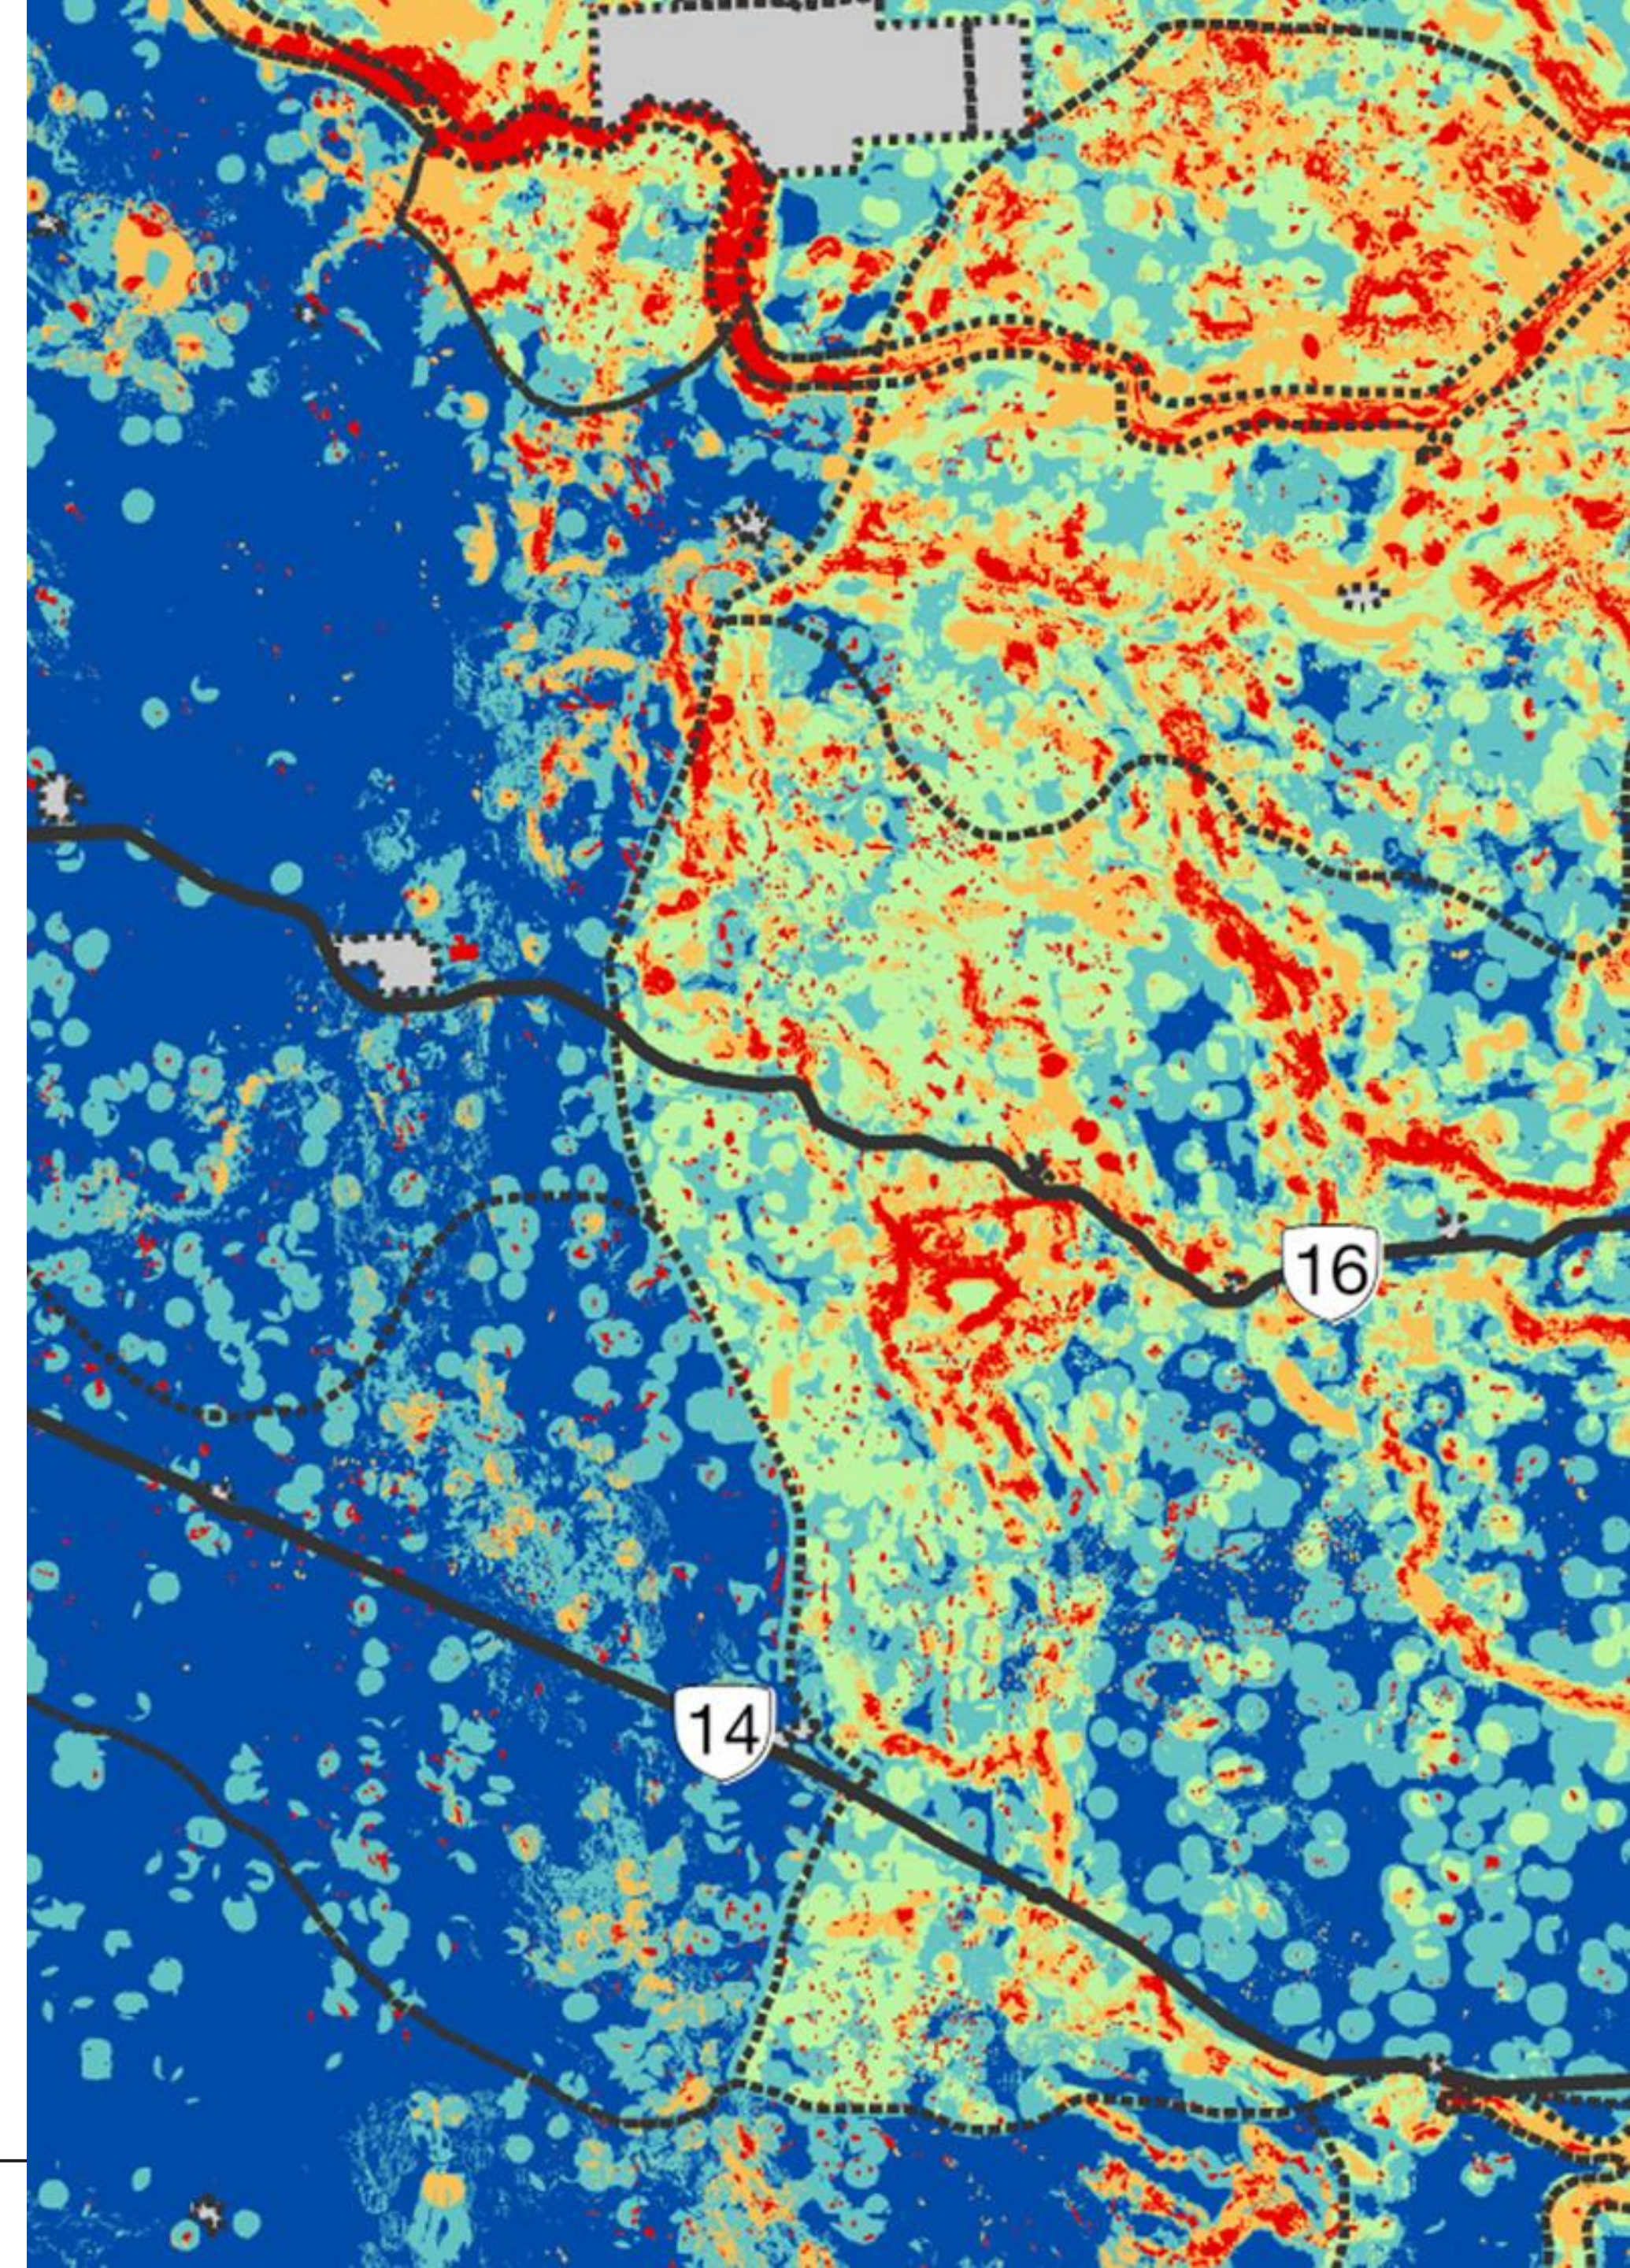

- Poligona izvēle un priekšizpēte
- Zondēšana un datu ievākšana
- Kartes melnraksta izveide
- Datu ievade /datubāzes izveidošana
- Digitizēšana / poligonu izveide
- Gatavās kartes noformēšana un analīze

## Kas ir nepieciešams kartes sastādīšanai?

- Programmatūra – QGIS
- WMS vai WCS slānis
- Pareizā koordinātu sistēma
- Datubāze
- Apveidfails (.shp)

# Kas ir WMS?

**Web Map Service (WMS)** ir standarta protokols, kas kalpo ģeogrāfisko karšu attēlu pārraidei internetā, ko ģenerē karšu serveris, izmantojot datus no ĢIS datu bāzes.

- LU ĢZZF karšu serviss
  - LU ĢZZF karšu serviss
    - Augšņu vērtējuma kartes
    - Augšņu kartes
    - Vēsture
    - Tālizpēte
    - Cilvēka ģeogrāfija
    - Fizikālā ģeogrāfija
    - Pamatiežu ģeoloģija
    - Kvartārģeoloģija
    - DEM
    - Topokartes
    - Ortofoto

ID	name	street	number	class	plan	date	time	area	length
1	Jones	Bell St.	12	4	true	2019-08-06	06:30:00	96,25	136,2
2	Smith	York St.	9	1	false	2018-01-10	08:25:15	112,37	242,0

## Basic data types:

- NUMERIC: INTEGER (long int, short int) - numbers, code list
- NUMERIC: FLOAT (double, real) - floating-point numbers
- STRING (char, varchar, text) - names and other texts
- DATE/TIME (date, time, year, timestamp) - data and/or time
- BOOLEAN (0/1, true/false, yes/no) - logical expression
- BLOB - multimedia files

# Kā izveidot jaunu vektordatu slāni?

The screenshot shows the QGIS interface with the 'New Shapefile Layer' dialog box open. The dialog is configured with the following settings:

- File name: (empty)
- File encoding: UTF-8
- Geometry type: (empty)
- Additional dimensions:  None,  Z (+ M values),  M values
- Coordinate Reference System: EPSG:3059 - LKS92 / Latvia TM

The 'New Field' section is configured as follows:

- Name: (empty)
- Type: abc Text Data
- Length: 80
- Precision: (empty)

The 'Fields List' table contains the following data:

Name	Type	Length	Precision
id	Integer	10	

The 'Fields List' table is empty except for the 'id' field.

The 'Additional dimensions' section is set to 'None'.

The 'Coordinate Reference System' is set to 'EPSG:3059 - LKS92 / Latvia TM'.

The 'New Field' section is set to 'abc Text Data' with a length of 80.

The 'Fields List' table shows the following data:

Name	Type	Length	Precision
id	Integer	10	

The 'Fields List' table is empty except for the 'id' field.

The 'Additional dimensions' section is set to 'None'.

The 'Coordinate Reference System' is set to 'EPSG:3059 - LKS92 / Latvia TM'.

The 'New Field' section is set to 'abc Text Data' with a length of 80.

The 'Fields List' table shows the following data:

Name	Type	Length	Precision
id	Integer	10	

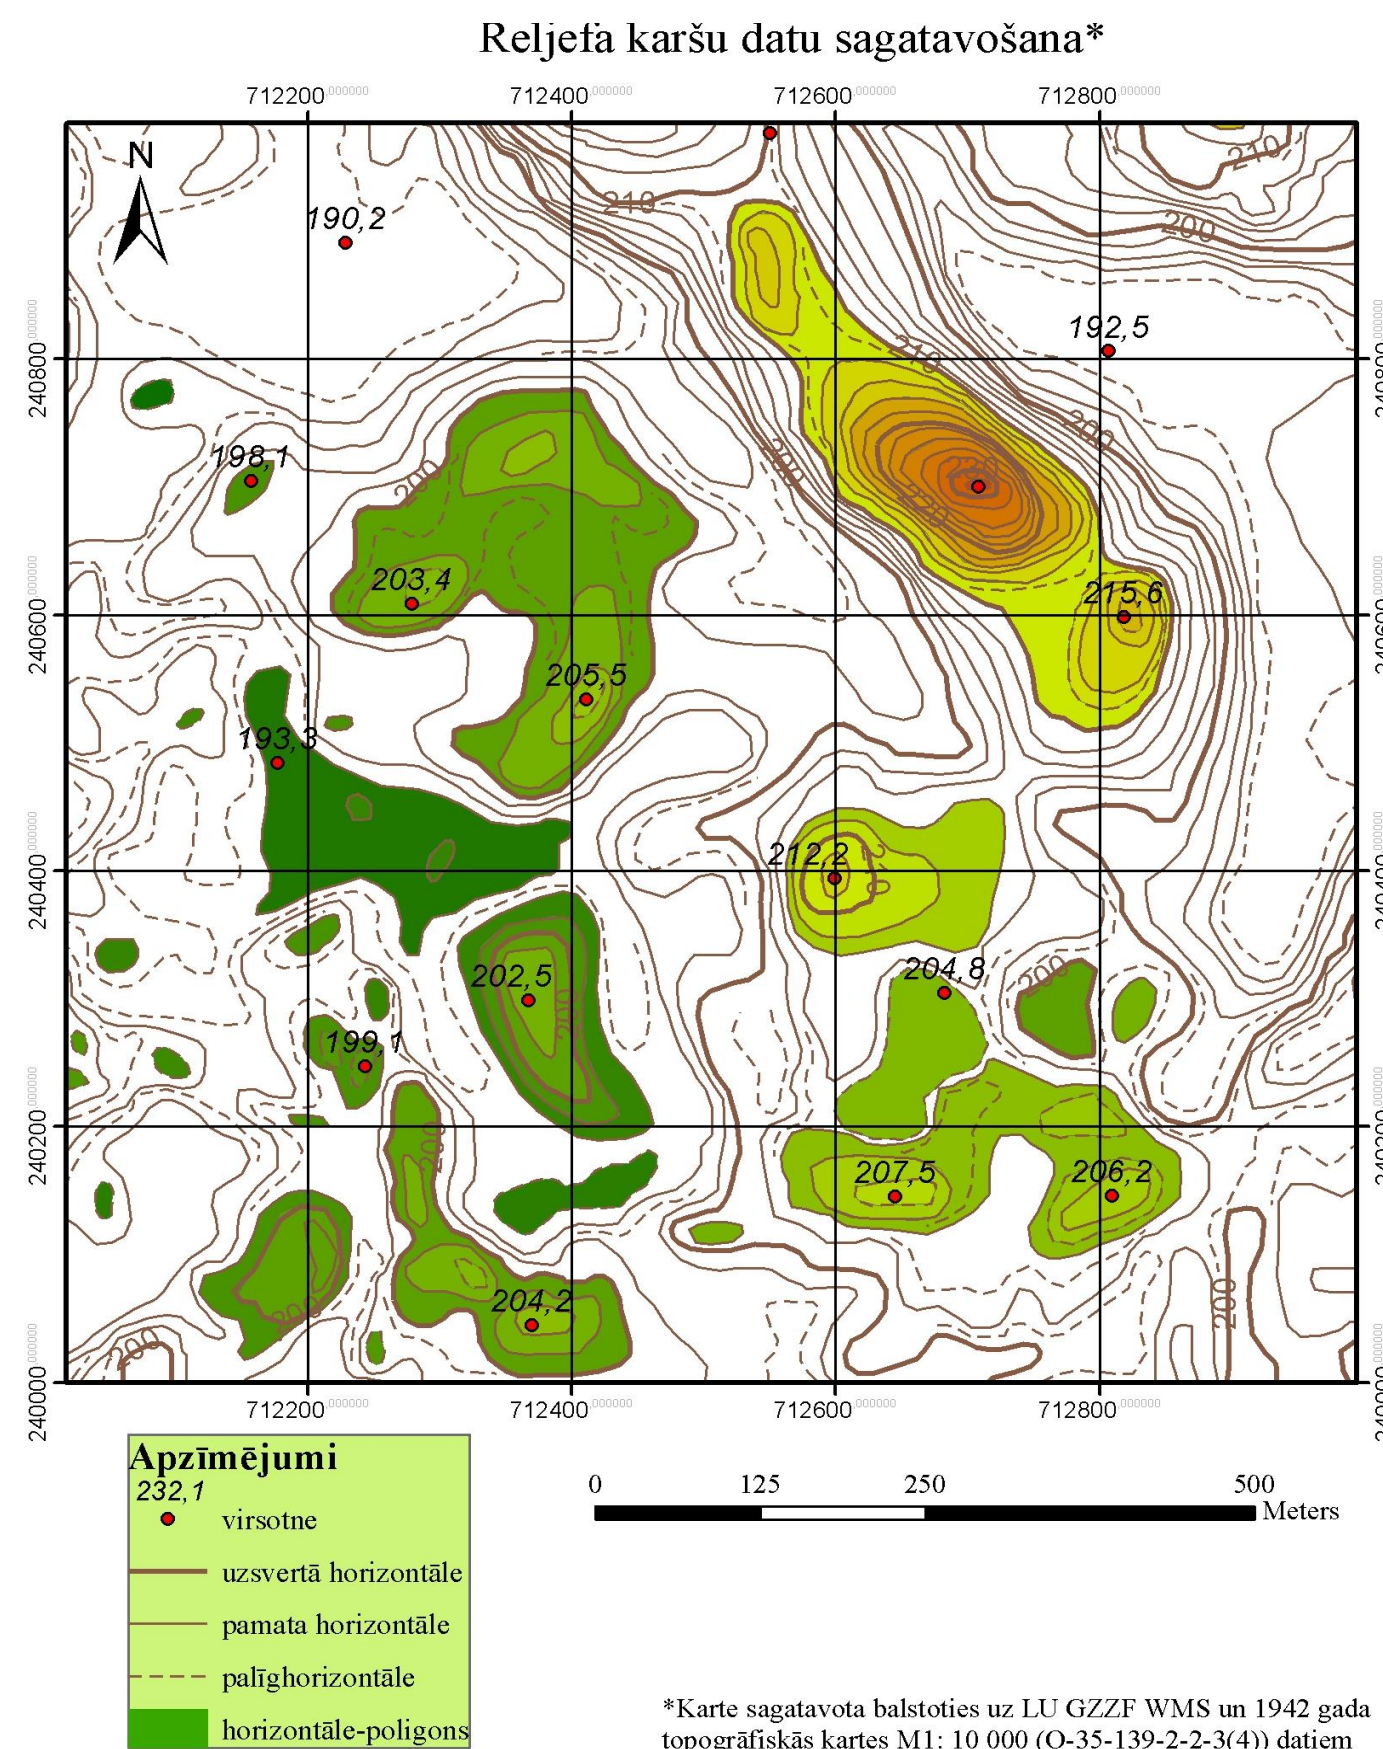

# Kā importēt Excel failu QGIS?

The screenshot displays the QGIS interface with the 'Data Source Manager | Delimited Text' dialog box open. The dialog is configured for importing a delimited text file. The 'File Format' section is set to 'Custom delimiters', with 'Semicolon' and 'Comma' checked as delimiters. The 'Record and Fields Options' section is configured to discard 0 header lines, with 'First record has field names' and 'Detect field types' checked. The 'Geometry Definition' section is set to 'Point coordinates', with 'X field', 'Y field', 'Z field', and 'M field' dropdowns. The 'Layer Settings' section has 'Use spatial index', 'Use subset index', and 'Watch file' unchecked. The 'Sample Data' section is empty. The background map shows a satellite view of a region in Latvia with a red boundary and various labels like 'Tz', 'Pg', 'Pgv', 'PgE1Pv'.

# Kartes noformēšanas prasības

\*Karte sagatavota balstoties uz LU GZZF WMS un 1942 gada topogrāfiskās kartes M1: 10 000 (O-35-139-2-2-3(4)) datiem

Nosaukums

Debespušu norādes bulta

Leģenda (apzīmējumi)

Mērogs

Kartes avots
